

Gizmo, an open
source graphical
web proxy

Pocket Knife, not Big Red Button

- Analysts are smarter than machines
- Will always understand the problem domain better than pre-canned algorithms
- What is needed is a tool that supports the analyst in their pentesting

What do people do when analyzing web applications

- Search
- Edit and resend
- Manipulate requests with scripting languages
- Intercept requests before editing
- ... That's about it.

Simple, Keyboard-Driven Commands

- Can move around using vi keys as god intended
- (Arrow keys available as well)

Free

- GPLv2
- On code.google.com as gizmo-proxy
- <http://code.google.com/p/gizmo-proxy/>

Questions

Want a copy of the presentation/tool?

- Email us at blackhat@isecpartners.com
