# Big Data

Data sets that are so large or complex that traditional data processing applications are inadequate to deal with them.

Source: Wikipedia

# What's being collected?

...and figure out what to do with it later

# Will Big Data Cure Cancer?

Big data technologies will play a key role in diversifying Saudi Arabia's economy away from a huge dependence on oil revenues.

## How the Chicago Cubs Used Big Data to Win the World Series

Data + Algorithms = **Big Data**

### Anti Face

This face is unrecognizable to several state-of-art face detection algorithms.

### Face

Once computer vision programs detect a face, they can extract data about your emotions, age, and identity.

[See how a face is detected](#)

# Camouflage from face detection.

CV Dazzle explores how fashion can be used as camouflage from face-detection technology, the first step in automated face recognition.

*From all appearances, deception has always been critical to daily survival—for human and non-human creatures alike—and,*

## FACE RECOGNITION TECHNOLOGY:

### FBI Should Better Ensure Privacy and Accuracy [Reissued on August 3, 2016]

GAO-16-267: Published: May 16, 2016. Publicly Released: Jun 15, 2016.

#### HIGHLIGHTS

#### What

The Department of Justice's Federal Bureau of Investigation (FBI) has been enforcing a policy that requires it to return a person's face scan data to the person within 15 days of the scan.

## N-GRAM-BASED AUTHOR PROFILES FOR AUTHORSHIP ATTRIBUTION

VLADO KEŠELJ<sup>†</sup> FUCHUN PENG<sup>‡</sup> NICK CERCONE<sup>†</sup> CALVIN THOMAS<sup>†</sup>

<sup>†</sup>*Faculty of Computing Science, Dalhousie University, Canada*

{vlado, nick, thomas}@cs.dal.ca

<sup>‡</sup>*School of Computer Science, University of Waterloo, Canada*

f3peng@cs.uwaterloo.ca

We present a novel method for computer-assisted authorship attribution based on character-level  $n$ -gram author profiles, which is motivated by an almost-forgotten, pioneering method in 1976. The existing approaches to automated authorship attribution implicitly build author profiles as vectors of feature weights, as language models, or similar. Our approach is based on byte-level  $n$ -grams, it is language independent, and the generated author profiles are limited in size. The effectiveness of the approach and language independence are demonstrated in experiments performed on English, Greek, and Chinese data. The accuracy of the results is at the level of the current state of the art approaches or higher in some cases.

*Key words:* Authorship attribution, character  $n$ -grams, text categorization

# Your writing

# Your timing

# Pattern of Life Analysis

# Personas

Everything you are, do, or  
use is linked to a persona.

If an activity wasn't  
intentionally done under  
an alt persona, it's linked  
to your true persona.

Anything can link two  
personas. Anything.

Links are bad.

mmkay?

# The Grugg's OPSEC: Because Jail is for wuftpd

# OPSEC Refresher

“Paranoia doesn’t work retroactively” - The Grugg

For any persona:

One account    - One persona    - One activity

One phone no.   - One persona    - One activity

One connection - One persona    - One activity

One home        - One persona    - One activity

One device      - One persona    - One activity

One location    - One persona    - One activity

One *anything else?*

One. Use.

“But Dave, what about a \_\_\_\_\_?”

One.

Use.

# Other Options?

ReactionGifs.me

When a new American diplomat arrives for duty at the U.S. embassy in Moscow or Beijing, CIA officials say, Russian and Chinese intelligence operatives run data analytics programs that check the “digital dust” associated with his or her name. If the newcomer’s footprint in that dust – social media posts, cell phone calls, debit card payments – is too small, the “diplomat” is flagged as an undercover CIA officer.

# OPSEC Fails

# Bombing the Test

# Bombing the Test

1. Go to Harvard
2. Take difficult class
3. Don't study for final exam
4. How do you get out of taking the exam?

Email a Bomb Threat!

# Bombing the Test

1. Started up Tor
2. Emailed bomb threat (via Tor) to:
  - a. Two Harvard officials
  - b. Harvard Police Department
  - c. The Crimson (Harvard's newspaper)
3. Went to take the test
4. Evacuated with other students

# Bombing the Test

1. Police determined the email sent via Tor
2. Looked at Harvard's network logs
3. ID'd Tor users at the time email was sent
4. Knocked on doors

# Conventional Advice

VPN = Privacy

Tor = Anonymity

- TOR connection to a VPN => OK
- VPN connection to TOR => GOTO JAIL

There's no one size fits all for OPSEC

# What about Bob?

# What about Bob? #1

1. Lives upstairs from a cafe
2. Goes downstairs to use their wifi
3. VM on personal laptop
4. Does [activity]

## What about Bob? #2

1. Drives across town to cafe
2. Brings phone but turns it off
3. Uses their wifi - with a proxy
4. VM on personal laptop
5. Does [activity]

## What about Bob? #3

1. Public transport to park with wifi
2. Phone is on at home
3. Uses Tor
4. Separate hardware
5. Does [activity]

# Information Leaks

# Summary

Assume everything is compromised

Be aware of links

Look at your own pattern of life

Adjust your personas' PoLs to be different

Watch out for leaks where you least expect them
